

Case: Real-time financial analytics platform

All-in-one FinTech platform that allows traders to compare themselves to their peers, gain insight into their activities via financial analytics, and provides resources to help them grow.

Key Deliverables

- Intuitive Data Visualisation
- Any platform accessibility
- High-level security for sensitive information
- Quick Big Data Processing

Challenges

Cross-platform availability

Users needed the ability to access the system from any device, any platform, and from any screen size.

Proof security

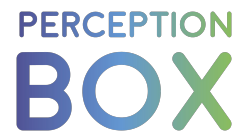

The system gathers and stores data from its users. Any personal information from name to income should be safe and secure within the system. Data security level had to match the security standards of individual trading data providers.

Results

- Work with us let the customer save at least 38% of development costs*
- Team covered all crucial parts with automated tests and additional tuning to avoid any vulnerabilities or data breaches
- We developed a platform for effective portfolio management in which traders could visualize their performance, compare results to others and compete for the attention of clients in real time
- System is able to process 7600 concurrent requests per second without using cloud scalable solutions.

*Comparing with the actual information on salary of developers in Florida (customer HQ location) according to Glassdoor.

End-to-end development

Get your project or a part of a product developed turn-key.

Estimates that work

We start from a free workshop on requirements that aligns expectations of the development and business teams, reduces the risk of doing unnecessary work, prioritizes the work based on meaningful budget. You receive materials, sufficient to start the work and whole product roadmap.

Rapid development with pre-made components

Cut development time by 50-65% by implementing our pre-made, cloud-compatible and integration ready software modules. These modules are the building blocks of most of the web and mobile products (e.g. users, payment, social networks, email alerts, notifications, file storage).

Value based delivery. Cut the tail.

We guarantee 2 week deliveries of new functional parts. You can show the working parts of the product to partners, investors, and the demo users, without waiting for the final version of the product to be developed. All changes are immediately shipped.

Why us

56% cut in development cost and time

- pre-made, cloud-compatible and integration ready software modules
- minimum time of the devops to set up the environment through automated solutions
- expand the project team for the necessary performance within 10 days.

100% headache-free infrastructure

- pre-set a development environment via automated solutions
- both cloud and dedicated-servers optimized
- we perform a set of updatable tests of web product security
- we carry out additional tuning of dedicated servers to prevent hacking through server.
