WORK EXPERIENCE

Full-stack developer, PerceptionBox, NDA

2017 – Present

Main Projects

Project: SewSewYou

Full-stack, Ruby on Rails developer

Participated in developing a secure web-based admin portal. Maintained and created features for sales, logistics and manufacturer modules. Made integration of the application with DHL Express/ Ecommerce API(XML and JSON based). Designed and implemented logic to manage customer orders based on available stuff at the manufacturer warehouse. Implemented logic to split customer orders by-products to create valid shipments based on declared price. Developed new features maintaining customer notifications on order application and logistic company statuses. Designed and developed manufacturer managing and statistics dashboard.

- **Technologies used:** Ruby, Ruby On Rails, Postgresql, JavaScript, jQuery, Slim, Rspec

Project: Cablook Taxi

Full-stack, Ruby on Rails developer

Participated in developing a front-end public-facing web application and secure web-based admin portal, integration of data storage solutions PostgreSQL. Worked on front-end implementation(ReactJS).

- **Technologies used:** JavaScript, Ruby on Rails, Postgresql, Rspec, Firebase, RSpec

Project: Fixpal

Full-stack, Ruby on Rails developer

Actively participated in developing the app, equally worked on the front/back -end parts. Worked with cloudinary images uploading for adding avatars/banners to the site, transforming them, etc. Fully changed in some designs on business pages. Made a new landing page with some switchers for all categories. Worked with filtering of businesses and other project database items, had some experience with Stripe api. Worked with many different js libraries that were included in the project. Got a lot of stuff to do it js files, so mostly worked with js files on the front-end part. Worked with tynymce for adding user ability to design his business description, like change font size, color, styling, etc. Have supported the project, integrating new features with the team, and maintaining the project.

- **Technologies used:** Ruby on Rails, Grape, Angular, OAuth, WebToken, Sass, Bootstrap, RSpec
